Michael J. McCrackin,

I would like to express my appreciation to Superior Electric for a job well done. Todd Meredith was the primary worker on this project (with the help of Pat O'Brien for a few days). Both were a pleasure to work with.

Todd was able to tolerate and work around our need for privacy on the MIOC floor as well as my 4-day work schedule. The work was also being done around many holidays so a Monday through Friday week after week consistent schedule was not possible either. He had to minimize work flow interference of people working in the MIOC each day. He also accommodated an un-anticipated deadline for completion.

Despite the obstacles, Todd was able to remain productivity and get the job done quickly. We never received any concern from staff that he was interfering with their work. His work was meticulously done with his attention to detail. He laid everything out just the way I had envisioned it and the work looks great! The termination boxes are going to work out beautifully!

Superior Electric was well represented on this project. Please convey my personal appreciation.

Sincerely,

Harvey M. Becker, CAD Administrator
